SUMMARY

Backend-focused software engineer architecting multi-tenant SaaS infrastructure (FastAPI, PostgreSQL) at NPT Solution, with an open-source project (PrepEdge AI) that has attracted 30+ GitHub stars and 10+ external contributors. LeetCode Knight (Peak Rating: 2041), 1000+ problems solved.

WORK EXPERIENCE

SDE Intern, NPT Solution (PawsPal Connect) – Remote

May 2026 - Present

- Architected a configurable RBAC system supporting role lifecycle management and fine-grained permissions, enabling administrators to manage access policies without developer intervention.
- Designed and deployed 20+ FastAPI endpoints powering authentication, appointment scheduling, onboarding, and clinic operations for a multi-tenant healthcare SaaS platform.
- Developed centralized authentication, validation, and permission enforcement mechanisms, improving code reusability and consistency across backend services.

PROJECTS

PrepEdge AI - AI Mock Interview Preparation Platform

[GitHub](#) | [Live Demo](#)

React.js, Express.js, MongoDB Atlas, Firebase, Cloudinary, Chart.js, jsPDF

- Built an AI-powered mock interview platform supporting resume-based question generation, automated evaluation, and detailed performance analytics for end-to-end interview preparation.
- Designed and developed 15+ REST API endpoints using Express.js and MongoDB Atlas, implementing Firebase Authentication and role-based middleware for secure interview workflows.
- Engineered analytics dashboards, PDF report generation, and resume parsing pipelines, reducing manual interview assessment effort by over 80%.

Lumen - AI Invoice Management System | Hack-a-Sol AI-Track Runner-up

[GitHub](#) | [Live Demo](#)

Next.js, TypeScript, TailwindCSS, Recharts, Framer Motion, Flask

- Developed a full-stack AI-powered invoice management system enabling OCR extraction, spending analytics, anomaly detection, and natural-language invoice querying within a 24-hour hackathon timeline.
- Built 10+ reusable components and owned the API integration layer connecting the OCR pipeline, invoice-processing workflows, and analytics dashboard to the backend.
- Implemented batch invoice processing, drag-and-drop uploads, and multi-format export pipelines, reducing invoice handling effort from minutes to seconds.

Snippad - Multi Language Coding IDE

[GitHub](#) | [Live Demo](#)

React.js, Styled Components, Judge0 API, Axios, React Router

- Built a browser-based multi-language IDE with real time code execution via the Judge0 API, handling submission, polling, and result rendering entirely on the frontend.
- Added local storage persistence, file upload/download, and multi-theme support with zero backend dependency.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, TypeScript

Frameworks & Tools: FastAPI, Express.js, REST APIs, React.js, Next.js, TailwindCSS, Docker

Database: MySQL, PostgreSQL, MongoDB

Coursework: OOPs, OS, DBMS, Data Structures & Algorithms, Computer Network, Design Patterns

Core Strengths: Ownership, Cross-functional Collaboration, Problem-Solving, Technical Communication

EDUCATION

National Institute of Technology, Raipur

2023 - 2027

B.Tech. – Computer Science and Engineering

CPI: 8.14/10

ACHIEVEMENTS

- **LeetCode Knight** (Peak Rating: 2041), Ranked 164/41,485 in Weekly Contest 493.
- **National Semi-finalist**, Flipkart GRIID 7.0 - was among the top 1% of over 1.6L participants.
- **Runner-up**, CodeUtsava 9.0 Hackathon (team "Vibe Coders") and Hack-a-Sol Hackathon (team "dUnderPressure").
- **Solved 1000+ algorithmic problems** across LeetCode, Codeforces, CodeChef, and GeeksforGeeks.

POSITION OF RESPONSIBILITY

Technocracy - Technical Committee of NIT Raipur

Documentation Executive

- Coordinated technical events during Aavartan'25 involving 200+ participants and managed documentation for 10+ committee initiatives.

GirlScript Summer of Code (GSSoC)

Project Admin

- Open-sourced my personal project leading 10+ contributors; performed code reviews and merged pull requests.
